

## **Boominator Roadside Spray Package**

It is an inexpensive way of spraying large areas without constructing a boom. The nozzle sprays at a right angle, sideways. The nozzle is made of stainless steel. The Boominator nozzle replaces the 'hard to get' Boombuster nozzle.

The roadside spray package is typically mounted on the passenger side's front bumper approx. 36" high.

You have to provide the mounting bracket and some misc. hardware. Usually the bracket is attached to the truck frame. It comes out under the bumper and goes straight up. Try to keep the nozzle out to the corner of the bumper, as the spray pattern begins directly under the nozzle.

The Roadside 2 Kit has 2 nozzles mounted, side by side, 36" high on the center front or rear bumper. It is commonly used on large properties, parking lots and industrial sites. Not recommended for liquid fertilizer as the pattern is not completely even.

Either model can also be used for dust control. Our standard system uses the 187 nozzle.

Inventories are seasonal, so order early.
