

Golf Green Speedmeter

This Speedmeter is made from 1/4" x 2" x 36" anodized aluminum bar, with a V-angle of 145 degrees, and a precision milled ball release notch 30" from one end. The end resting on the green is milled on the underside to reduce bounce when the ball contacts the green.

When checking the speed of a green, select a level area of about a ten foot circle. Place a golf ball in the notch and raise one end slowly (20 degrees) until the ball rolls down the V incline and out onto the green. Do this with three balls from the same spot and record the distance from the coin or tee to where the ball stops. Repeat with three balls from the opposite direction. The average of the six measurements is the speed of the green. For example, if the six measurements were 10', 9.5', 9.8', 11', 11.3', 10.8', then the speed of the green is $(10 + 9.5 + 9.8 + 11 + 11.3 + 10.8)/6 = 10.4'$.

General Information on Greens Speeds

For Regular Play:

8-9 Feet	Fast
7-8 Feet	Semi-Fast
6-7 Feet	Medium
5-6 Feet	Semi-Slow
4-5 Feet	Slow

For Tournament Play:

10-11 Feet	Fast
9-10 Feet	Semi-Fast
8-9 Feet	Medium
7-8 Feet	Semi-Slow
6-7 Feet	Slow
